About Kerone

KERONE now renowned name in serving specialized need of customers with best quality and economical process Heating /cooling and drying products, manufactured in high quality environment by well trained and qualified workforce(special purpose machineries) .

KERONE is pioneer in application and implementation engineering with its vast experience and team of professionals. KERONE is devoted to serve the industry to optimize their operations both economically and environmentally with its specialized heating and drying solutions.

“Enhance the value of customer operation through our customer need centric engineering solution”

Mission

- To enhance the value of customer operation through our customer need centric engineering solution.
- We are committed to provide our customers, unique and best in class products in Industrial heating, drying and cooling segment, with strategic tie-up for the technical know-how with renowned leader in the industry specific segment.

Vision

- Turn into world leader in providing specialized, top-notch quality and ecological industrial heating, cooling and drying solution across the globe.
- To attain global recognition as best of quality and environment friendly engineering solution company.

Introduction to Quartz Tube Heaters

Our directional quartz elements feature shielding that deflects radiant energy away from the shielding side of the tube. This creates a "cool side" and is ideal for heating environments where it is undesirable to radiate heat in all directions. This allows OEM's to offer customers more efficient use of limited space.

We can manufacture these innovative elements in virtually any size. Two varieties are available:

Gold Vapour Treated

Pure gold is applied to one side of the tube in a patented process. This micro-thin shield is approximately 93% reflective, allowing you to reduce component size, avoid heat dissipation and interference in process, and concentrate useful heat energy.

Ceramic Fiber

A strip of special-composition nonconductive ceramic fiber is inserted into the tube parallel to the resistor for low cost directional heat.
