About Kerone

KERONE now renowned name in serving specialized need of customers with best quality and economical process Heating /cooling and drying products, manufactured in high quality environment by well trained and qualified workforce(special purpose machineries) .

KERONE is pioneer in application and implementation engineering with its vast experience and team of professionals. KERONE is devoted to serve the industry to optimize their operations both economically and environmentally with its specialized heating and drying solutions.

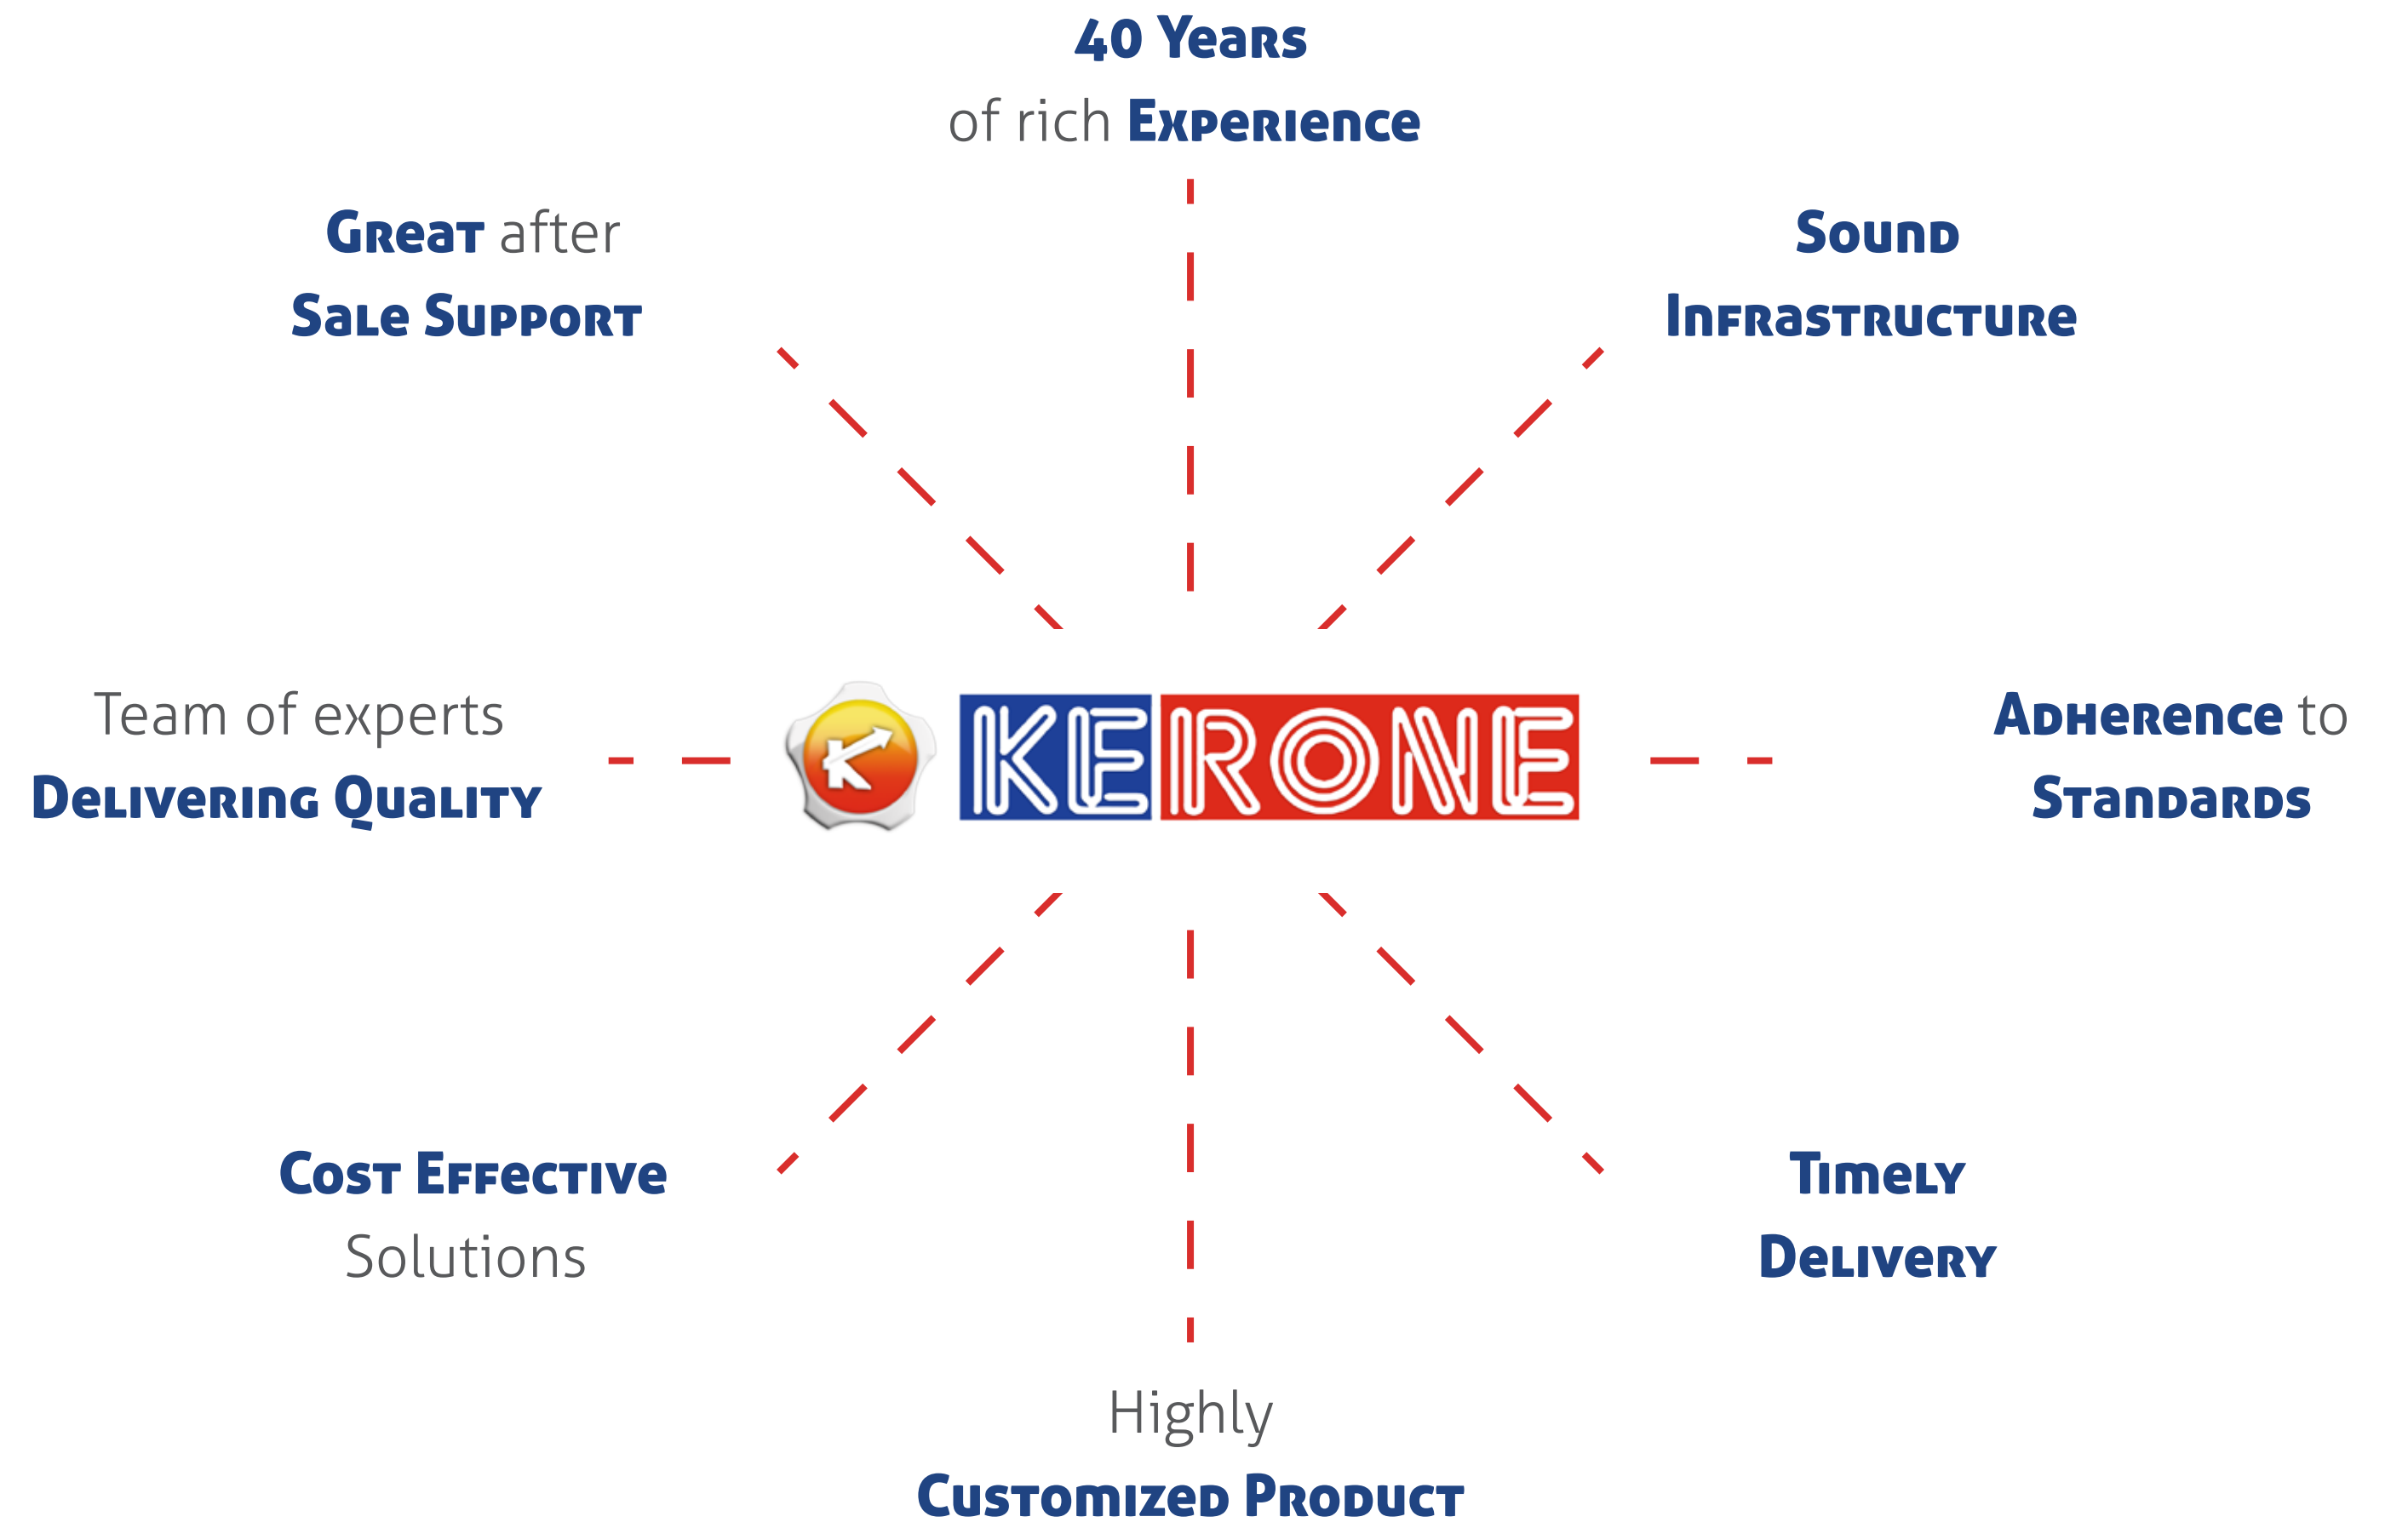

“Enhance the value of customer operation through our customer need centric engineering solution”

Mission

- To enhance the value of customer operation through our customer need centric engineering solution.
- We are committed to provide our customers, unique and best in class products in Industrial heating, drying and cooling segment, with strategic tie-up for the technical know-how with renowned leader in the industry specific segment.

Vision

- Turn into world leader in providing specialized, top-notch quality and ecological industrial heating, cooling and drying solution across the globe.
- To attain global recognition as best of quality and environment friendly engineering solution company.

Introduction to Space Heaters

A space heater is a device for heating an enclosed area, we at KERONE are having veteran team of engineers and designer those continuously strive to provide the best product to client for their process need across the world.

Space Heaters Embedded Elements and Metal Casted Elements offered comprise bundles of heating material that are grouped together for heating any space where the heat transfer can take place through means of conduction, convection or radiation, depending upon operating temperature as well as the method employed.

These embedded elements function as heaters embedded in metal/non-metal casing so as to achieve uniform heating. Further, these are also used in hotplates for heating larger surface area as well as to result quicker dissipation of heat. With heat emitted through radiation taking place in different air flow levels, these elements can also be used in ducting as well as hot air batteries. Being available in different operational range of 3 KW to 450 KW and we provide the mechanism to control the heat.

Features

- Rugged and light weight construction
- Easily Controllable heat transfer
- Little and trouble-free maintenance
- Solid construction
- Swift and Easy installation
- Accurately designed and engineered
- Hassle-free functioning
- Longer service life
- High durability
- Energy and Cost efficient
- Proficient performance

Application

- Chemicals Processing
- Fertilizers
- Pharmaceutical Industry
- Hot Water Generators
- Boilers
- Other Industry Sectors
